CC REPORT

Mobile Reporting for Management

CAM COW CO., LTD.

Why CC REPORT

Management visibility shouldn’t require opening a laptop.

BEFORE

- Wait for someone to export a report from the web app
- Figures already a day or two old by the time they’re shared
- No quick way to check numbers away from a desk

WITH CC REPORT

- Live figures, straight from the same ERP operations staff use
- One tap, secured by a personal PIN — no password to remember
- The exact same numbers a colleague sees on the web dashboard, right now

Signing In, Securely

A personal PIN replaces the username-and-password screen entirely.

6-digit PIN

Issued to you by your system administrator — no username or password to type.

Stored the right way

PINs are never kept as plain text — the server only ever stores a one-way cryptographic hash.

Locks out guessing

Repeated incorrect attempts trigger a cooling-off period before another try is allowed.

Dashboard at a Glance

The first screen after sign-in answers “how are we doing right now” in one look.

Active herd

Head count, plus how many have sold

Net profit & margin

Revenue less expenses, as a percentage too

This month vs. last

Profit trend with an up or down indicator

Avg. weight

Across the active herd, updated live

Mortality rate

Flagged automatically whenever above zero

Farm-by-farm

Head, batches, and net profit per location

A Report for Every Question

Eight focused reports, reachable in two taps from anywhere in the app.

Herd overview

By health, breed, farm

Financial reports

Revenue, expenses, sales ledger

Notifications

Health, selling prep, feed

Farm comparison

Net profit, ranked

Growth trends

Avg. daily weight gain

Sales reporting

Revenue by farm & period

Health & veterinary

Recent care activity

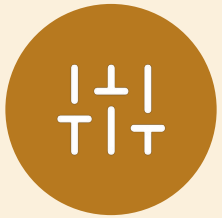

Feed inventory

Stock levels, low-stock alerts

SPOTLIGHT

The Fattening Proposal Calculator

The one screen in the app that talks back.

Every other report is a fixed, live view. This one is a scratchpad: adjust herd size, growth rate, purchase and selling prices, or feed costs right on the screen, and the projected profit, cost breakdown, and per-head economics recalculate instantly.

Nothing you change here is ever saved — not to the server, not even on your phone.

It's a private way to talk through "what if selling prices dropped 10%?" on the spot. Close the screen and your edits are gone — the company's actual saved plan is always untouched.

Built for Security

Read-only by design — there is no path from this app back into your data.

Strictly read-only

Every screen only displays data. Weigh-ins, sales, and treatments are still entered by operations staff in the main system.

Hashed credentials

PINs and passwords are hashed with bcrypt — never stored, logged, or transmitted as plain text.

Signed sessions

Every sign-in issues a signed session token (JWT); nothing about who you are is guessable or reusable by someone else.

Scoped by role

Farm staff and veterinarians see only their own farm; only admin-level accounts can switch between farms.

Getting Started

Three steps between a new manager and their first live report.

1

Get a PIN

Your administrator creates your account and sets your 6-digit PIN from the web app's Settings page.

2

Install the app

CC REPORT is distributed as an Android app — ask your administrator for the current install file.

3

Sign in and go

Open the app, enter your PIN, and your farm's live figures are one tap away.

Questions about access, a lost PIN, or a number that looks wrong — talk to your system administrator or the operations team who entered the record.

Thank You

Live numbers. Anywhere. Anytime.
