CC REPORT

Mobile App User Guide for Management · Cam Cow Co., Ltd.

What this app is for

CC REPORT is a companion app for managers and owners who need to check on the business without opening a laptop. It pulls live figures — herd, finances, sales, health, and feed — straight from the same LiveStock ERP system your operations team uses every day.

It is read-only by design. Nothing you do in this app changes any record. Weigh-ins, purchases, treatments, and sales are still entered by operations staff in the main system — this app is purely for viewing and reporting.

Because every number comes live from the server, whatever you see on your phone is the same figure a colleague would see on the web dashboard at that moment — there is no separate copy of the data to fall out of sync.

Signing in

Open the app and enter your 6-digit PIN on the keypad. There is no username to type and no password screen — your PIN is issued to you by an administrator and identifies you automatically.

- Each digit fills a dot at the top of the screen; the app checks your PIN as soon as the sixth digit is entered.
- An incorrect PIN clears the entry so you can try again.
- After several incorrect attempts in a row, the app locks out further tries for a short cooling-off period, as a precaution against someone guessing.
- Don't have a PIN yet, or forgot it? An administrator sets and resets PINs from the web app's Settings page — ask them rather than trying to recover it yourself.

Getting around

Five tabs sit along the bottom of every screen:

Tab	What it shows
Dashboard	The executive summary — your herd, profit, and trends at a glance
Herd	A breakdown of the herd by health, breed, and farm
Finance	Revenue, expenses, and the recent sales ledger
Alerts	Open notifications that need attention
More	The rest of the reports, plus your account

If your account has access to more than one farm, a **farm selector** appears near the top of most report screens. Tap it to switch between "All farms" and a single farm — every figure on that screen narrows to match. Accounts that are scoped to just one farm (for example, farm staff or a veterinarian) won't see this selector; their reports are already limited to their own farm.

Dashboard — Executive summary

This is the first screen you see after signing in, and the fastest way to answer "how are we doing right now."

- **Active herd** and how many head have sold
- **Net profit**, with the profit margin as a percentage of revenue
- **Revenue** and **Expenses** side by side
- **Average weight** across the active herd
- **Mortality rate** — highlighted in red whenever it's above zero
- A **this-month card** comparing net profit so far against last month, with an up or down arrow
- **Active batches** and a live **Health alerts** count — tap the alerts tile to jump straight to the Health & veterinary report
- When viewing "All farms," a per-farm list showing active head, batch count, and net profit for each farm, so you can see at a glance which locations are carrying the business

Pull down on the screen at any time to refresh with the latest figures.

Herd overview

A closer look at the animals themselves: how many are active, sold, or have died, and the average weight across the active herd. Below the summary, the herd is broken down three ways — by health status, by breed, and by farm — so you can quickly spot, for example, a farm with an unusually high share of animals in poor health.

Financial reports

Revenue and expenses for the period, with a recent sales ledger showing individual sale transactions as they come in. This is the screen to check before a meeting where someone is going to ask "what did we actually make this month."

Notifications

A read-only list of everything currently flagged as needing attention, grouped into three areas:

- **Health** — animals whose health status needs a look
- **Selling prep** — cattle approaching the point where they're ready for sale
- **Feed** — products running low on stock

The subtitle at the top of the screen shows the total number of open items. Tapping an item does not resolve it — resolving alerts happens in the operations app, the same place the underlying record was created.

More — the rest of the reports

The **More** tab is a menu to five additional reports plus your account:

Report	What it covers
Farm comparison	Every farm ranked by net profit, side by side
Growth trends	Average daily weight gain over the last 10 recorded days
Sales reporting	Revenue and average sale price, broken down by farm
Health & veterinary	Recent care and treatment activity

Report	What it covers
Feed inventory	Stock levels by product, with low-stock items called out
Fattening proposal	A what-if planning calculator — see below
Account	Your profile, and where to sign out

Fattening proposal — the one interactive screen

Every other report in this app is a fixed view of live data. The Fattening proposal report is different: it's a planning calculator. It opens with either your company's saved plan or a standard set of benchmark figures, and every assumption — herd size, growth rate, purchase and selling prices, feed costs, bank interest — is editable right on the screen. As you adjust a figure, the results below it (projected profit, cost breakdown, per-head economics) recalculate instantly.

Nothing you change here is saved anywhere — not to the server, not even on your phone. It's a private scratchpad for talking through a scenario ("what if selling prices dropped 10%?") on the spot. Close the screen and your edits are gone; the company's actual saved plan is untouched.

Your account

Tap **More → Account** to see your name, email, role, and which farm (or farms) you're scoped to. This is also where you sign out — tap **Log out** at the bottom of the screen. Signing out clears your session from this device; you'll need your PIN again to sign back in.

Getting help

Because this app is read-only, there's nothing to "undo" if a number looks wrong — the fix always happens at the source. A quick guide to who to ask:

Something's off with…	Talk to…
A number that looks wrong (weight, sale price, expense)	Operations staff — they enter the underlying records

Something's off with…	Talk to…
Your PIN — lost, forgotten, or you want it changed	Your system administrator
A new manager needs access	Your system administrator, via the web app's Settings page
The app itself — won't load, crashes, looks broken	Whoever manages the LiveStock ERP system for your farm
