CAM COW SYSTEM

Complete User Guide

LiveStock Fattening ERP · CC REPORT Mobile App

Official Training & Operational Manual

CAM COW CO., LTD. · SEPTEMBER 2026 · VERSION 1.0

Table of Contents

01 **System Overview**
What the system is (and isn't), and the real workflow

02 **User Roles & Permissions**
The 7 built-in roles and what each can do

03 **All Modules & Functions**
Every real module in the web ERP and mobile app

04 **Step-by-Step Instructions**
How to do the core tasks in each module

05 **Complete End-to-End Workflow**
A cow's full path through the system

06 **Troubleshooting**
Common messages, what they mean, what to do

07 **Glossary**
System terms, plainly defined

What the Cam Cow System Is

A cattle-fattening operations platform — from purchase to sale.

LiveStock Fattening ERP (web)

The full system, used on a computer: register cattle, run fattening batches, track weight/health/feed, record sales & expenses, and manage users, roles, and farms.

CC REPORT (mobile app)

A companion phone app for checking on the business. Signs in with a 6-digit PIN. Read-only reporting, except for one private what-if calculator that saves nothing.

Data is farm-scoped.

An administrator sees every farm. A Farm Owner, Farm Staff member, or Veterinarian sees only their own farm's animals, batches, and records.

IMPORTANT

What This System Is Not

This guide documents the real, verified system — not the workflow originally assumed.

There is no breeding, insemination, pregnancy, calving, sire/dam pedigree, herdbook, certificate, or QR-code traceability feature anywhere in the Cam Cow System.

One related item exists — but it is not functional:

A female cow's detail view shows a "Reproductive & Breeding State" badge — but it always reads "Open / Ready", for every animal, regardless of its actual state. It isn't connected to any stored data. Treat this as decorative, not a working breeding-tracking feature.

Marked "Verification Required" throughout this guide rather than invented.

The Real Workflow

Login › Dashboard › Farms (admin) › Register Cattle › Fattening Batch › Weight & Health › Feed Stock › Sale › Expenses & Analytics

Adjusted to match the system as it actually exists today.

The Seven Built-In Roles

Each is a fixed bundle of permissions — custom roles can also be built in Settings.

Role	Can do	Farm scope
Super Admin	Everything in the system	All farms
Admin	Everything in the system	All farms
Company	Everything in the system	All farms
Farm Owner	Everything except Settings & Farm management; can view (not manage) feed	Own farm only
Farm Staff	View Dashboard/Stock/Batches; record weight & health; view feed	Own farm only
Veterinarian	View/edit Stock; full Health access; record weight; view feed	Own farm only
Management	Read-only across every report — no create/edit/delete anywhere	As configured

Management is the role meant for mobile PIN sign-in — deliberately read-only, since a short 6-digit credential should never unlock the ability to change data.

How Permissions Actually Work

Permission settings control which buttons and screens a user sees in the web app. Farm scoping works the same way — by filtering what's shown to a user's assigned farm.

Good to know

Treat permissions as an operational safeguard for day-to-day use, not as a hard security boundary — they are a UI-layer convenience, verified through code review rather than a formal security audit. Talk to Cam Cow's technical team before relying on them for anything sensitive.

SECTION 3 · ALL MODULES & FUNCTIONS

Every Module in the Web ERP

Dashboard
Farm-scoped KPI overview

Cattle Registry
Register & view the herd

Batch Management
Fattening programs

Weight Tracker
Growth history per cow

Medical & Vaccines
Health & treatment logs

Sales
Cow & batch sales

Expenses
Operating cost ledger

Analytics
Growth & profit reports

Cattle Feed Stock
Products & transactions

Farms & Branches
Locations & owner logins

ERP Master Setup
Users, roles, PINs, lists

CC REPORT — Mobile Companion

PIN sign-in, then read-only reporting — with one interactive tool.

Dashboard, Herd, Finance, Alerts

Farm comparison & growth trends

Sales & health reporting

Feed inventory

Fattening Proposal — a private what-if calculator; saves nothing, anywhere

Account — read-only info & log out

Signing In

Web ERP

- Enter your Email and Password.
- Select “Authenticate Access”.

COMMON MESSAGES

“Email and password are required.” — a field was left blank

“Invalid email or password.” — check spelling; case-sensitive

“This account is inactive.” — ask an admin to reactivate it

CC REPORT (mobile)

- Enter your 6-digit PIN.
- The app signs you in automatically on the 6th digit.

COMMON MESSAGES

“Enter your 6-digit PIN.” — fewer than 6 digits entered

“Incorrect PIN.” — doesn’t match any active account

“Too many incorrect PINs…” — 5 wrong tries locks the device 15 min

Registering New Cattle

Stock (Cattle Registry)

1. Open Stock (Cattle Registry) and choose to add a new animal.
2. Enter the Cattle Tag ID — must start with “CC-” and not already be in use.
3. Fill in Breed, Sex, Age, and Initial Weight (must be greater than 0 kg).
4. Choose a Buy Type. “Born in Farm” and “Transfer” zero out the price fields automatically.
5. Fill in Health Status, Purchase Date, Purchase Type, and Payment Method — all required.
6. Owner name, location, phone, and a photo (max 5MB) are optional.
7. Save. The system creates the cow’s record and logs its starting weight automatically.

GOOD TO KNOW

After a cow is registered, the “Log Weight / Edit” action only opens the weight/health quick-update screen — there is currently no screen to change a cow’s breed, sex, age, owner, or purchase details after it’s been created.

Creating a Fattening Batch

Batch Management

1. Open Batch Management and start a new batch.
2. Enter a Batch Name, choose the Farm Location and Program Type, and set the Start Date.
3. Select at least 3 cattle to enroll (required when creating a new batch).
4. The Selling Target Date is calculated automatically — Start Date + 90 days — and can't be typed in.
5. Save. If the type is "Fattening Program", a default feed ration attaches automatically.
6. Once active, use "Weigh All Cows" or "Sampling Estimation" (3 representative cows) to record progress.

REQUIRED FIELDS

Batch Name, Farm Location, Program Type, Start Date, and at least 3 cattle. Selling Target Date is system-calculated, not entered.

Recording a Weight Check

Growth & Weight Tracker

1. Open Growth & Weight Tracker (or the quick-entry Weight tab from Stock).
2. Choose the cow, enter the new Weight (must be greater than 0), and current Health Status.
3. Set the Date.
4. Save. The cow's live weight/health status updates and a new history entry is added.

GOOD TO KNOW

Only a cow's most recent weight record drives its live weight/health status. Editing an older record recalculates that record's gain, but won't move the cow's current figures.

Logging a Health Event

Medical & Vaccines

1. Open Medical & Vaccines.
2. Choose the cow and the Event Type — Vaccination, Treatment, Disease, or Deworming.
3. Fill in the Name, Date, Treatment Cost, and who Administered it.
4. Notes are optional.
5. Save.

AUTOMATIC EFFECT

A “Disease” entry automatically marks the cow’s health status Poor; a “Treatment” entry marks it Good. Vaccination and Deworming don’t change health status.

Recording a Sale

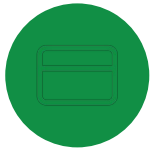

Sales

1. From Stock or Batch Management, choose Record Sale for one cow or an entire batch.
2. Pick the Sale Type — Weight (price per kg × scale weight) or Lumpsum (one fixed price).
3. Enter the price and date.
4. Save.

AUTOMATIC EFFECT

The cow's status becomes Sold; selling a whole batch also closes that batch. Deleting a sale later reverts the cow to Active.

Logging an Expense · Feed Stock-In

Logging an Expense

1. Open the expense ledger under Feed Costs & Revenue.
2. Choose a Category, enter the Amount and Date.
3. Add a Description.
4. Save.

Feed Stock-In

1. Open Cattle Feed Stock and start a new stock-in transaction.
2. Choose the Product, Date, and Quantity in Bags (at least 1).
3. “Log Purchase Cost to Finance Ledger?” is checked by default.
4. Save — a matching expense entry is created automatically if checked.

Adding or Editing a Farm

Farms & Stall Branches

1. Open Farms & Stall Branches and select “Add New Farm Branch”.
2. Enter the Farm Branch Name and Capacity (10–1000 head).
3. Enter the Owner Full Name, Login Email, and Login Password.
4. Address and notes are optional.
5. Save.

AUTOMATIC EFFECT

Creating a farm automatically creates that farm’s owner login account. Deleting a farm removes that owner account and un-scopes any staff assigned there — they become “Global (All Farms)” until reassigned.

Adding a User

ERP Master Setup → Users

1. Open ERP Master Setup → Users and add a new account.
2. Enter Name, Email, and a Password (required on create; leave blank on edit to keep the existing one).
3. Choose the Role.
4. Optionally set a PIN for mobile sign-in — at least 6 digits, not an obvious pattern, and not already used by another account.
5. Save.

GOOD TO KNOW

A Farm Owner's own created accounts are locked to their farm and limited to the Farm Staff / Veterinarian roles — they can't grant admin-level access.

A New Animal, Start to Finish

1

Log in with a web or mobile account.

2

(Admin) Set up the farm the animal belongs to, if it doesn't exist yet.

3

Register the cow under Stock — tag ID, breed, starting weight, purchase details.

4

Enroll it in a fattening batch (3+ cattle) with a 90-day selling target.

5

Record weight checks periodically — individually or via batch sampling.

6

Log health events as they happen — disease/treatment auto-update health status.

7

Feed stock deducts automatically each day; top up via Feed Stock-in.

8

Sell the cow once it reaches target weight — individually or with the batch.

9

Review Analytics & Dashboard — revenue, cost, and profit/loss update automatically.

Common Messages

Message / situation	What it means	What to do
Invalid email or password.	Login credentials don't match	Re-check spelling; passwords are case-sensitive
This account is inactive.	The account was deactivated	An admin must reactivate it in Settings
Too many incorrect PINs...	5 wrong PINs on this device	Wait for the timer — lockout is per-device, not per-account
Cattle Tag ID rejected	ID doesn't start with "CC-", or is already registered	Use a unique ID starting with "CC-"
Feed low-stock warning	Remaining stock is below the configured bag threshold	Log a Feed Stock-in transaction to replenish
Cow's weight didn't change	Only the most recent weight record drives live status	Edit or add the most recent record instead

VERIFICATION REQUIRED

Not Found in the System

- Breeding, insemination, pregnancy, calving, sire/dam pedigree, herdbook, certificate, and QR-code traceability — none of these exist anywhere in the system as reviewed.
- The “Reproductive & Breeding State” badge on a female cow’s detail view is cosmetic only — always “Open / Ready”, not backed by data.
- Role-deletion says affected users “default back to Company” — no code path performing that reassignment could be confirmed; treat as unverified.
- Server-side enforcement of permission checkboxes beyond hiding UI buttons could not be confirmed — don’t treat permissions as a hard security boundary without checking with Cam Cow’s technical team.

SECTION 7 · GLOSSARY

System Terms, Plainly Defined

ADG

Average Daily Gain — the standard measure of how fast a fattening cow gains weight

Batch

A group of cattle enrolled together in one fattening (feeding) program

Farm-scoped

Data limited to the one farm an account is assigned to

Lumpsum sale

A cow sold for one fixed price, rather than a price per kilogram

PIN

The 6-digit code used to sign in on the CC REPORT mobile app only

Scale / Weight sale

A cow sold at a price per kilogram, multiplied by its weight at sale

Stock

The system's term for an individual, registered animal

Stock-in

Adding new feed inventory to a farm's feed stock
